What are the plans to make all employees computer literate?

So far there is no specified policy for **capacity Building** of the staff. However the state government insist on that employees should pass the RSCIT CCC program of RKCL (visit for detail <http://rkcl.in/educationprograms.php>) by a paying a fee. And on producing the pass certificate they can get refund of the **course fees Rs 2700/- per candidate** from the Government/ organisation they are employed in. But for this Administration should issue necessary orders and link this with Promotional avenues so that Employee opts for it. So far no such administrative action has been initiated in the university by our establishment section.

Also in the new recruitments, computer literacy must be made mandatory irrespective of post /cadre. This is also being adopted by state government. Again this requires policy level changes and orders from top level.

The Guest House of the M.D.S. University is known as Shradhanand Shikshak Atithi Grah. It is situated on the Pushkar Bye Pass Road, near Jaipur - Ajmer National Highway No.8. It was formally inaugurated by the then Governor of the state Shri Bali Ram Bhagat on 13th Oct 1996. This is a modern, double-storied building located in the foothills of the Aravali mountain range. A well organised Guest House is the pride of any institution. The Guest House provides accommodation to Academicians, scholars and other persons visiting the University for official purposes. ALGAE BIOFUEL & BIOMOLECULES CENTRE (ABBC)

Introduction: Price hike of petroleum products and its imminent depletion in sight have forced a serious thought on the alternative sources of energy. While coal can satisfy electricity demand for many years, the CO₂ output nails it to dust. Wind is the cheapest but cannot be harnessed everywhere. Varying with weather; wind, tide and solar energy need to be converted to a storage form. Hydrogen is considered the answer but technology development needs time, while batteries cannot run heavy machinery and airplanes. While most of the sources of river based hydel energy have been tapped, option of nuclear energy is fraught with insecurities and India would need ~150-175 nuclear reactors to meet targeted 25% of the total energy demand by 2050.

Biological alternatives include alcohol, biodiesel, biogas, hydrogen and electricity through microbial fuel cells. Last two technologies are not ripe. Alcohol production depends on available sugars. Use of sucrose is easier and cheaper than starch than the cellulosic and lignocellulosic molecules. Alcohol can run the vehicles but the energy output is pretty less than biodiesel. Biogas is the cleanest of them all but other than energy, oil derived products are part of our daily lives today. Unfortunately biological alternatives encroach other fast diminishing resources, namely land and freshwater, which in turn affect availability of food. Land and freshwater demand though comparatively less, would be there for most of the other sources of energy as well.

Considering this Algae Biofuel & Biomolecules Centre (ABBC) was established in lines of Section 5 (d) of the University Act by the Board of Management of the Maharshi Dayanand Saraswati University Ajmer vide Decision No. 12 dtd 28.8.2010 and Order No. F 13 () Acad-I/MDSU/2011/10532-70 dtd. 3.3.11. The ABBC is an interdisciplinary Research and Outreach Program involving 9 faculty members from Microbiology, Environmental Science, Food Science & Nutrition, Economics and Management.

Algae, a group of microscopic plants are known for Agar agar, Agarose, Kelp, Algin, Alginate, Carrageenan, Xanthophyll, Blue Green Algal Biofertilizers, production of fish-feed and food/feed supplements as Spirulina and Chlorella and Wastewater remediation, yet their potential for biofuel and bioenergy production is untapped. Rajasthan with ample of sunlight and long hours of sunshine is ideal for the cultivation of algae. Therefore ABBC was established to conduct research and develop technologies for cheaper cultivation of algae as the feedstock for biofuel, bioenergy and biomolecules in a biorefinery mode and generate workforce for >700 venture capital enterprises based on algae.

It has following functions:

- a. Research and technology development and demonstration
- b. Research collaborations
- c. Information dissemination
- d. Capability Building

Throughout the world there is an acute scarcity of persons trained in algae. The Centre proposes to begin a PG course in Biofuel & Bioenergy or in Microbiology with specialization on algae biofuel as soon as the faculty is inducted for Fermentation (Methane and Alcohols), Lignocellulose hydrolysis, Fuel Cell, Lipid transformation to biodiesel and biodiesel qualities, Biofuel crops and their cultivation.

Aims and goals

The ABBC aims to develop and disseminate economically feasible technology for biofuel production through algae and generate skilled manpower with a larger goal to wheel India's economic growth through carbon dioxide-neutral biofuels without using freshwater and arable land and simultaneously reducing its pollution load.

Objectives

To meet the above stated aims and goals following objectives are set:

1. Technology development for algae biodiesel production
2. Technology development for alternate algae biofuels production
3. Capability Building (HRD & Information dissemination)
4. Technology development for the production of other biomolecules from the spent algal biomass
5. Technology demonstration and environmental impact assessment
6. Feasibility assessment
7. Technology dissemination, IPR & Human resource requirement assessment

Facilities developed:

1. Algae Cultivation Trial and Demonstration Area: 16 x 22 m fenced area with three trenches and small tray (1 x 1.5 ft) systems for solid surface and floating cultivations. Area is sufficiently big to put up Pilot Scale Mass cultivation Systems
2. Heavy duty Cooling Centrifuge
3. Oxitop BOD System with incubator
4. 62" x 28" x 14" fibersheet solid surface and raceway type cultivation system prototypes (3 each)

In pipeline:

5. Titroline autotitration system
6. Automatic 6 place solvent extraction system
7. Weather station

Teaching (Skill oriented)

Two courses have been introduced as electives in M.Sc. Microbiology program of learning under Choice Based Credit System. They are:

1. MIC 433 Energy and Alternative Energy (1L) and
2. MIC 427 Sk Biofuel & Bioenergy (3L+2P)
