paper will be counted as a chance.

practical he/she will be required to appear again in all the subjects
(theory) except practical only as an ex-student.

OBJECTIVE
1. It is important that our youngsters are made aware of the glorious part of our country. Our past is not only glorious but it is a source of inspiration.
2. It is our sages who contributed to enrich our past. Our sages did never hanker after personal glorification. They spread Indian culture and civilization not only within our country, but also in distant lands. It is only for this reason that our country became the center of ‘knowledge tourism’ and greatest centers of learning thrived in this country.
3. Our country also becomes a centre of fine arts such as dance, music, drawing painting etc. Moreover, no country in this world can boast of the artistic monuments, in number as well as quality of which we in this country can proud of.

We hope that study of ‘Indian culture and thought’ will enrich the knowledge of students regarding a period of our history about which little is known.

Objectives:
The pupil teacher will be engaged to:
  • Gain an understanding of different theoretical perspectives on learning with a
    focus on cognitive views of learning,
  • understand cognitive capacities of learners,
  • understand, appreciate and create a constructivist learning environment,
  • develop understanding of diversity, learning styles and learning needs, and
  • Explore the immense possibilities of an understanding of human cognition and
    meaning making as a basis for designing learning environments and
    experiences.

There are five Units. Questions will be set from each Unit.

Course Outline
Unit I: Theoretical Perspectives on learning
1. Behaviouristic and cognitivist views on learning with reference to Skinner,
   Piaget, Bruner and Vygotsky.
2. Cognitive field theory – Kohler and Lewin
3. Social learning theory – Bandura
4. Humanistic approach to learning – Maslow
5. Information processing model Rogers and Sternberg

2. Meaning and concept of mind, consciousness and cognition.
3. Structure and process of cognition (sensation, perception, attention, concept-
   formation, memory and problem-solving).

monitoring).
3. Multiple Intelligence (Gardner)
4. Emotional Intelligence (Goleman).
5. Learning, and thinking styles.

Unit V: Creating Learning Environment

environments, students as active meaning makers and teacher as a facilitator
and co-learner.
2. Concept, mapping, experiential learning, problem solving, collaborative
learning (cooperative and peer tutoring), creative learning and multi sensory
approach.
5. Nurturance of creativity and the role of teacher.

- **Transactional Modalities**
  - Lecture-cum-discussion for the presentation of overviews.
  - Anecdotes and reflective writings based on own experiences.
  - Audio-visual clippings of learning situations and interactions, analysis and
discussion in small groups as well as in large groups.
  - Group presentations
  - Examples of constructivist learning situations, case-studies, their analysis
and discussion.
  - Field based experiences.
- **Practicum**

presentation in the classroom.
  2. Case studies of learning environment in school situation and submitting the
report.
  3. Choosing a topic of any school subject and teaching through constructivist
approach.
  4. Developing material based on Piaget’s task analysis, administration,
interpretation and discussion of the results.
- **Assessment**
This course has conceptual as well as practical inputs and they should both be
assessed. There should be initial focus on formative assessment with a view to
bringing some shifts in the pupil teacher awareness, sensibilities and outlook
on learning and later ‘summative’ evaluation can be done. It should be kept in
mind that the concepts in this course have a key role to play in the manner in which pupil teacher will formulate their role vis a vis students’ learning and so the applications of these to analysing or designing learning situation should be stressed, rather than knowledge of terminology etc. even while evaluating summatively. This will mean a more imaginatively constructed test paper.

- **Modes of assessment**
  - Reflective written Assignments – comments and grades
  - Field observation notes – comments and grades
  - Participation in discussion – to be assessed qualitatively
  - Analysis of learning situation and case study, using theoretical perspective – to be assessed for conceptual grasp and clarity of analysis – comments, further questions, and grade.
  - Final written test can be given on above mentioned Units - evaluated with marks.

There should be initial focus on ‘formative assessment’ with a view to bringing some shifts in the pupil teachers awareness, sensibilities and outlook on learning and later ‘summative’ evaluation can be done. It should be kept in mind that the concepts in this course have a key role to play in the manner in which pupil teacher will formulate their role vis a vis students learning and so the applications of these to analysing or designing learning situations should be stressed, rather than knowledge of terminology etc, even while evaluating summatively. This will mean a more imaginatively constructed test paper.

- **Modes of Assessment:**
  - Reflective written Assignments – Comments and grade
  - Participation in discussions – to be assessed qualitatively
  - Final written test can be given on ‘conceptual grasp’ of theories of learning and cognition, as well as ‘working understanding’ of constructivist approach to construction of knowledge – evaluated with marks.
